# Tara Kulkarni

Backend Developer

Bengaluru, India • tara.kulkarni@example.com

## Summary

Backend developer with four years building order-management APIs in Node.js and PostgreSQL. Works on validation, database queries and asynchronous processing with tests for failure and retry behaviour. Collaborates with product and support colleagues to turn recurring issues into maintainable changes.

## Experience

**Backend Developer, Example Birch Commerce Software** Jan 2024 - Present

*Bengaluru, India*

- Built and maintained order-management API endpoints used by three internal applications, with documented request validation and error responses.
- Reworked a slow order-history query and added an appropriate index, reducing p95 response time from 920 to 410 milliseconds in the recorded staging load test.
- Added idempotency handling and retry tests to an asynchronous import job, preventing duplicate order creation in repeated test submissions.
- Introduced structured error logs for import failures and wrote a support runbook that linked error categories to safe investigation steps.

**Junior Backend Developer, Example Birch Commerce Software** Aug 2022 - Dec 2023

*Bengaluru, India*

- Maintained reviewed API handlers and added validation for malformed order requests.
- Reproduced reported database errors and added regression cases before submitting fixes for review.

## Education

**B.Tech in Computer Science** 2018 - 2022

*Example Lakeside Institute*

## Skills

**Backend development:** Node.js, TypeScript, REST APIs, Asynchronous jobs

**Data and quality:** PostgreSQL, Query plans, Integration tests, Idempotency, Structured logging

## Projects

**Order import demonstration**

- Created a synthetic order import service with validation, duplicate-request handling and integration tests.
- Documented failure cases, retry behaviour and the limits of the demonstration deployment.
